PERSONAL PROJECTS

Ecommerce Website(Nike Clone)

- Developed a responsive Nike-inspired e-commerce clone as a personal college project using **HTML, CSS, and JavaScript**, implementing product listings and interactive UI components while applying modern **UI/UX principles** to ensure clean design and cross-device usability.

Cyber-SafeNet

- Developed **Cyber Safe Net – A Phishing Website Detector** using **Python** for backend logic and machine learning, with a web interface built using **HTML, CSS, and JavaScript**, showcasing practical implementation of phishing detection and full-stack integration.

Car Lane Detection(Semi-Autonomous)

- Developed a **semi-autonomous car lane detection system** using **Python, NumPy, and OpenCV**, implementing image processing techniques to detect and visualize road lane markings from images and video streams.
